

# Immunisation under spotlight

(By Phyllis King)

About 60 concerned parents gathered in Paeroa last Saturday to listen to Hilary Butler an independent researcher on non-immunisation and Anne Bottcher, a homeopathic consultant.

Hilary brought with her a video which was shown at the beginning of the day. It was not about immunisation, it was in fact about Aids.

It was made by a Dr Robert Streckler who works at the Pasadena University in U.S.A. He is one of the most highly qualified doctors in the U.S.A.

In this video he explains how the World Health Organisation in combination with the National Institute of Cancer in U.S.A. manufactured the Aids virus. He details how and he details the documentation on which he bases his assertions and then he explains how it happened.

This video will soon be available in our Immunisation Awareness Group Library for any interested people to see.

Many people say that they can trust the Health Dept., but what have we been told about Aids. We have been told that it descended from someone who got bitten by a monkey!

If they can not be truthful about something so important as Aids how can we believe them about something like vaccinations.....

Hilary read out from the International Circular to Physicians, printed by the manufacturer of the plasma based vaccine MSD, hypersensitivity reactions which included arthritis (usually transient), fever, and dermatologic reactions such as urticaria, erythema multiforme, or ecchymoses. Neurological disorders such as paresthesia and acute radioculoneuropathy including Guillain-Barre Syndrome have been rarely reported in temporal association with administration of HB Vax.

No cause and effect has been established. In other words the Health Dept.; has taken this to mean that nothing has been proven.

However, as Hilary explained, the manufacturers have made a Fraudian slip.

In the International Physicians Circular distributed by the manufacturers of the yeast based vaccine there is a long list of side effects including the above and many more but the important paragraph is ...."in addition, a variety of side effects not observed in clinical trials with HB Vax. 2 (yeast vaccine) have been reported with H-B-Vax Plasma derived Hep B Vaccine."

This circular has been out only about six weeks but what it is saying is this, all the side effects observed proven with plasma derived vaccine are not observed with the yeast based one.

This is a classic manufacturer situation of playing something new being better than something in existence, but, we aren't talking of cars, washing machines or television sets here, we are talking about a vaccine that we are at this very moment injecting into our newborn babies and children.

We read and hear on television and radio the Health Dept., repeatedly saying there are no side effects. What is this based on? Is it based on the circular put out by Merck, Sharp and Dohme on the plasma derived vaccine?

If so, then our health authorities better read the yeast based vaccine circular and change either their minds or their vaccines as the manufacturers have proven side-effects of H-B-Vax.

Hilary has written five papers on non-immunisation which are all available through our group. Her fifth paper titled "Hepatitis B Immunisation" is 56 pages and should be read by everyone intending to vaccinate their children, and more importantly, by every doctor and nurse intending to do the vaccinating.

Hilary's attitude to good health is holistic and this was

supported by Anne Bottcher when she discussed a homeopathic alternative to vaccinations.

Anne was concerned about the stress put on young mothers by the Health Dept., that if they don't vaccinate their children they are not good mothers. Because of this she evolved and wrote a programme using homeopathy to raise the immunisation system to fight off these varying things that the Health Dept., says we need to vaccinate against.

One of the main differences between homeopathy and allopathy is that where allopathy (orthodox medical) treats the disease or systems, homeopathy treats the whole body and seeks to uplift the whole immune system.

Anne believes that essentially we are what we eat, drink, breathe and think and thus we should, as much as possible, eat clean homegrown organic food, drink pure non-chemically treated water, breathe clean unpolluted air and think and act towards ourselves, our children, each other and our environment with love and care, ensuring that if we take care of our planet it will take care of us.

Everyone who attended felt they had learned something and many left with the intention of campaigning against our present immunisation programme and ensuring that more people become 'informed.'

From my point of view it was a sad fact that not one doctor or health professional was present. Are they afraid they might have to change their minds?
